

AgriVision — Leaf Disease Scan Report

Report ID: AGV-20260803-08A29A | Scanned: 2026-08-03 15:43 UTC

Original Image

Disease-Highlighted Image

Plant Species	Strawberry
Disease	Leaf Scorch
Prediction Confidence	54.8%
Affected Leaf Area	31.0%
Severity	Severe

Urgent: Severity is Severe: isolate or remove severely affected plant material promptly and consider a follow-up scan after treatment to confirm improvement.

Treatment Recommendations

Remove and destroy infected leaves after harvest and apply a labeled fungicide during wet spring conditions.

Prevention Recommendations

Renovate beds annually, avoid overhead irrigation, and space plants for airflow.

Methodology note: disease classification model status is 'fine_tuned'. Infected-area segmentation used the 'classical_cv' backend, a classical color-based image analysis method (not a trained neural segmentation model) unless otherwise noted. Results are decision support, not a substitute for in-person diagnosis by a plant pathologist for high-value or ambiguous cases.
