

AgriVision — Leaf Disease Scan Report

Report ID: AGV-20260803-183E5C | Scanned: 2026-08-03 09:26 UTC

Original Image

Disease-Highlighted Image

Plant Species	Tomato
Disease	Late Blight
Prediction Confidence	32.3%
Affected Leaf Area	7.2%
Severity	Mild

Treatment Recommendations

Apply a labeled fungicide immediately at first symptoms and remove/destroy severely infected plants to slow spread; this disease can be highly destructive if untreated.

Prevention Recommendations

Plant resistant varieties, avoid overhead irrigation, ensure good airflow, and monitor local blight forecasts during cool wet weather.

Methodology note: disease classification model status is 'fine_tuned'. Infected-area segmentation used the 'classical_cv' backend, a classical color-based image analysis method (not a trained neural segmentation model) unless otherwise noted. Results are decision support, not a substitute for in-person diagnosis by a plant pathologist for high-value or ambiguous cases.
