

AgriVision — Leaf Disease Scan Report

Report ID: AGV-20260803-780671 | Scanned: 2026-08-03 09:18 UTC

Original Image

Disease-Highlighted Image

Plant Species	Tomato
Disease	Healthy
Prediction Confidence	70.8%
Affected Leaf Area	36.8%
Severity	Severe

Urgent: Severity is Severe: isolate or remove severely affected plant material promptly and consider a follow-up scan after treatment to confirm improvement.

Treatment Recommendations

No treatment necessary.

Prevention Recommendations

Continue routine scouting, balanced watering, and crop rotation.

Methodology note: disease classification model status is 'fine_tuned'. Infected-area segmentation used the 'classical_cv' backend, a classical color-based image analysis method (not a trained neural segmentation model) unless otherwise noted. Results are decision support, not a substitute for in-person diagnosis by a plant pathologist for high-value or ambiguous cases.
