Disease-Highlighted Image

|                       |          |
|-----------------------|----------|
| Plant Species         | Corn     |
| Disease               | Healthy  |
| Prediction Confidence | 87.7%    |
| Affected Leaf Area    | 17.4%    |
| Severity              | Moderate |

## Treatment Recommendations

No treatment necessary.

## Prevention Recommendations

Continue routine scouting and residue/rotation management.

Methodology note: disease classification model status is 'fine\_tuned'. Infected-area segmentation used the 'classical\_cv' backend, a classical color-based image analysis method (not a trained neural segmentation model) unless otherwise noted. Results are decision support, not a substitute for in-person diagnosis by a plant pathologist for high-value or ambiguous cases.
