

AgriVision — Leaf Disease Scan Report

Report ID: **AGV-20260803-E14371** | Scanned: 2026-08-03 15:39 UTC

Reliability warning: No clear leaf detected — a leaf-colored region covers only 0% of the frame. This result may not reflect a real leaf photo; try a closer, well-lit photo of a single leaf.

Original Image

Disease-Highlighted Image

Plant Species	Corn
Disease	Healthy
Prediction Confidence	70.5%
Affected Leaf Area	0.0%
Severity	Healthy

Treatment Recommendations

No treatment necessary.

Prevention Recommendations

Continue routine scouting and residue/rotation management.

Methodology note: disease classification model status is 'fine_tuned'. Infected-area segmentation used the 'classical_cv' backend, a classical color-based image analysis method (not a trained neural segmentation model) unless otherwise noted. Results are decision support, not a substitute for in-person diagnosis by a plant pathologist for high-value or ambiguous cases.
